REPORT

OF

GOOGLE AI-ML VIRTUAL INTERNSHIP

Submitted to

School of Computer Science and Engineering
IILM University, Greater Noida, Uttar Pradesh

In partial fulfilment of the requirement for the degree of
Bachelor of Technology (B.Tech) in Computer Science and Engineering

Submitted by

AYUSH KUMAR SINGH
B.Tech (Computer Science and Engineering)
IILM University, Greater Noida
Internship Duration: August–October 2026 | 8 Weeks

Academic Batch: 2026–2027

CANDIDATE’S DECLARATION

I, Ayush Kumar Singh, hereby declare that this report titled “Google AI-ML Virtual Internship Report” has been prepared to fulfil the academic requirement for the Bachelor of Technology degree in Computer Science and Engineering. The report is based on the internship offer letter, the completion certificate, and the internship learning plan provided for this purpose. Any description of tools, workflow, and learning outcomes is presented as a summary of the programme materials and the learning domain; it should not be interpreted as a claim of an unlisted project or deployment.

Signature: _____

Student Name: AYUSH KUMAR SINGH
University: IILM University, Greater Noida

ACKNOWLEDGEMENT

I express my sincere gratitude to IILM University, Greater Noida, for providing an academic environment that encourages practical learning and professional development. I am thankful to EduSkills and the programme partners identified in the internship documents for providing the opportunity to participate in the AICTE–EduSkills Google AI-ML Virtual Internship. I also thank my teachers, family, and everyone who supported my learning journey.

AYUSH KUMAR SINGH

B.Tech (Computer Science and Engineering)
IILM University, Greater Noida

INTERNSHIP COMPLETION CERTIFICATE

Copy of the certificate provided for the completed internship.

CHAPTER 4: PROJECT DESCRIPTION

4.1 Introduction

The Google AI-ML Virtual Internship was an eight-week virtual learning programme scheduled for August–October 2026, as stated in the offer letter and completion certificate. The programme was designed to provide structured learning and practical exposure in machine learning and computer vision. Its week-wise plan progresses from neural networks and TensorFlow to object detection, product image search, and image classification.

The internship complements the academic curriculum of B.Tech in Computer Science and Engineering by introducing a structured sequence of AI/ML topics and application-oriented activities. The report documents the learning plan and the programme information contained in the supplied documents.

4.2 Organization Profile

The offer letter identifies EduSkills as the organization issuing the internship offer and describes the programme as an AICTE–EduSkills Virtual Internship. The completion certificate displays the Ministry of Education, AICTE, National Internship Portal, and EduSkills branding. It identifies the internship as an AI-ML Virtual Internship and shows support from the India Edu Program / Google for Developers. These statements are limited to the details visible in the supplied documents.

4.3 Problem Statement

Computer science students benefit from guided practice that connects machine-learning theory with applied computer-vision use cases. The internship's stated learning plan addresses this educational need through progressive modules on neural networks, object detection, product image search, and image classification, supported by weekly assessments and assignments.

4.4 Project Objectives

- Understand foundational machine-learning concepts and neural networks using TensorFlow.
- Study object detection and the integration of pretrained detectors into mobile applications.
- Explore custom object-detection model training using TensorFlow Lite and Model Maker.
- Understand the steps involved in building product image-search features using on-device detection.
- Explore custom image-classification models and their integration into an application.
- Develop a structured approach to weekly assessments, technical assignments, and final evaluation.

4.5 Scope of the Internship

The scope is educational and skill-oriented. It follows the eight-week curriculum specified in the offer letter. The report describes the planned topics and intended practical exposure; it does not claim a particular commercial application, a measured model-accuracy result, or an independently completed software deployment because those details are not established by the supplied documents.

4.6 Technologies and Tools in the Learning Plan

The offer letter explicitly names TensorFlow, TensorFlow Lite, and Model Maker in the week-wise curriculum. It also refers to pretrained object detectors, on-device object detection, backend integration for mobile product image search, and custom image-classification models. These are the tools and technical concepts directly supported by the supplied internship plan.

The documents do not provide a complete software environment specification, dataset list, model architecture configuration, or performance metrics. Such details are therefore not asserted in this report.

4.7 System Architecture / AI-ML Workflow

The week-wise learning plan can be summarized as a progression from foundational model concepts to application-oriented computer vision:

Stage	Learning focus
1. Foundations	Neural networks and TensorFlow
2. Object detection	Pretrained detectors and mobile integration
3. Custom detection	TensorFlow Lite and Model Maker
4. Product image search	On-device object detection for images and camera feeds
5. Integration	Backend integration for mobile product search
6. Image classification	Build and integrate custom image classifiers

Figure 4.1: Summary of the AI-ML learning workflow described by the internship curriculum.

4.8 Week-wise Methodology

The offer letter provides the following eight-week structure. The descriptions below preserve the programme's stated topics.

Week	Module	Description / Learning focus
1	Program neural networks with TensorFlow	Machine-learning foundations and convolutional neural networks for image recognition and classification.
2	Get started with object detection	Basics of object detection and integrating pretrained detectors into mobile apps.
3	Go further with object detection	Train custom object-detection models using TensorFlow Lite and Model Maker.
4	Get started with product image search	Build product image search using on-device object detection.
5	Get started with product image search	Detect objects in static images and live camera feeds for visual product search.
6	Go further with product image search	Build backend integration for mobile product-search applications.
7	Go further with image classification	Build custom image-classification models and improve classification skills.
8	Go further with image classification	Create and integrate a custom image classifier into an app.

Evaluation Process

- Follow the week-wise structured learning plan.
- Complete weekly assessments to track progress and understanding.
- Submit project documentation and assignments for modules where required.
- Appear for the Final Assessment Test in the final week.
- The offer letter states that the final grade is based on weekly assessments, project submissions, and the final test.

The offer letter notes that the internship does not carry a stipend.

4.9 Expected Learning Outcomes

- Improved understanding of neural networks and basic machine-learning concepts.
- Familiarity with object-detection use cases and mobile application integration.
- Exposure to custom object detection with TensorFlow Lite and Model Maker.
- Understanding of the product image-search flow, including on-device detection and backend integration.
- Experience with the concepts involved in building and integrating image-classification models.
- Improved discipline in completing assessments and documenting technical learning.

These are learning outcomes inferred from the stated curriculum; the supplied documents do not provide individual assessment scores or model-performance results.

4.10 Certificates of Completion and Supporting Documents

The supplied completion certificate states that Ayush Singh of IILM University, Greater Noida successfully completed the eight-week AI-ML Virtual Internship during August–October 2026. The certificate identifies support from the India Edu Program and Google for Developers. The offer letter gives reference number C18Y2026M081530773 and identifies the internship domain as Google AI-ML.

APPENDIX A: INTERNSHIP OFFER LETTER

The following page is included as supporting documentation supplied for this report.

EduSkills®
Nation Building Through Skills

Ref No: C18Y2026M081530773

Internship Offer Letter

Student Name	: Ayush Singh
Stream	: B.Tech
Branch	: B.Tech(Computer Science and Engineering)
Institute Name	: IILM University, Greater Noida
Internship Domain	: Google AI-ML
Internship Duration	: August 2026 - October 2026
AICTE Student ID	: NA

We are pleased to inform you that you have been selected for the 8-Week **AICTE – EduSkills Virtual Internship Program**.

During this internship, you will learn and demonstrate industry-relevant skills that will enhance your employability and strengthen your confidence in the subject area.

The program is designed to provide structured learning combined with practical exposure.

Internship Structure & Evaluation:

- The internship will follow a **week-wise structured learning plan**.
- You will be required to complete **weekly assessments** to track your progress and understanding.
- Certain modules will require submission of **project documentation and assignments**.
- In the final week, you must appear for a **Final Assessment Test**.
- The final grade will be based on your overall performance, including weekly assessments, project submissions, and the final test.

Upon successful completion of all required steps and assessments, you will be awarded a **Virtual Internship Certificate**.

Please note that this offer letter will be considered valid only after the successful completion of the internship program and fulfillment of all assessment requirements, including obtaining the final completion certificate. Without the final completion certificate, this offer letter shall not be treated as a valid document for any official purpose.

EduSkills®
Nation Building Through Skills

The week wise Structure of the Internship is as Follows:

Week	Module	Description
week 1	Program neural networks with TensorFlow	Everything you need to know to demystify machine learning, from first principles to creating convolutional neural networks for advanced image recognition and classification.
week 2	Get started with object detection	Basics of object detection and integrating pretrained object detectors into mobile apps.
week 3	Go further with object detection	Train custom object-detection models using TensorFlow Lite and Model Maker.
week 4	Get started with product image search	Build a product image search feature using on-device object detection.
week 5	Get started with product image search	Detect objects in static images and live camera feeds for visual product search.
week 6	Go further with product image search	Build backend integration for product image search mobile applications.
week 7	Go further with image classification	Build custom image-classification models and improve classification skills.
week 8	Go further with image classification	Create and integrate a custom image classifier model into your app.
Final Credential Validation / Internship Grade Point Assessment		

Note: There is no stipend associated with this internship.

We congratulate you on your selection and wish you a successful learning journey.
